

# Zomato Data Analysis Project

## Project Title

### **Zomato Data Analysis using SQL**

---

## Project Overview

This project focuses on performing exploratory and analytical SQL queries on the Zomato dataset to derive meaningful business insights.

The analysis includes:

- Restaurant distribution analysis
- Country-wise restaurant percentage analysis
- Online delivery analysis
- Table booking analysis
- Cuisine popularity analysis
- Locality-based restaurant insights
- Ratings analysis
- Best restaurant recommendations

This project is designed for:

- SQL practice
  - Data analyst portfolio projects
  - GitHub showcase projects
  - Interview preparation
  - Real-world business analysis understanding
- 

## Tech Stack

- SQL
  - MySQL / PostgreSQL / SQL Server
  - CSV Dataset
  - Git & GitHub
-

## Project Structure

Zomato-Data-Analysis/

## Database Schema

### Create Database

```
CREATE DATABASE zomato_analysis;  
USE zomato_analysis;
```

---

### Create Table

```
CREATE TABLE zomato_dataset (  
    RestaurantID BIGINT,  
    RestaurantName VARCHAR(255),  
    CountryCode INT,  
    City VARCHAR(255),  
    Address TEXT,  
    Locality VARCHAR(255),  
    LocalityVerbose VARCHAR(255),
```

```
Longitude DECIMAL(10,6),
Latitude DECIMAL(10,6),
Cuisines TEXT,
AverageCostForTwo INT,
Currency VARCHAR(100),
HasTableBooking VARCHAR(10),
HasOnlineDelivery VARCHAR(10),
IsDeliveringNow VARCHAR(10),
SwitchToOrderMenu VARCHAR(10),
PriceRange INT,
AggregateRating DECIMAL(3,2),
RatingColor VARCHAR(50),
RatingText VARCHAR(50),
Votes INT
);
```

---

## Import CSV Data

```
LOAD DATA INFILE 'Zomato_Dataset.csv'
INTO TABLE zomato_dataset
FIELDS TERMINATED BY ','
ENCLOSED BY '"'
LINES TERMINATED BY '\n'
IGNORE 1 ROWS;
```

---

## SQL Analysis Questions & Solutions

---

### 1 Display all records from the Zomato dataset

```
SELECT *
FROM zomato_dataset;
```

---

### 2 Find the rolling/moving count of restaurants in Indian cities

```
SELECT
    City,
    COUNT(RestaurantID) AS restaurant_count,
```

```

SUM(COUNT(RestaurantID)) OVER(
    ORDER BY COUNT(RestaurantID)
) AS rolling_restaurant_count
FROM zomato_dataset
WHERE CountryCode = 1
GROUP BY City;

```

---

### 3 Find the percentage of restaurants present in all countries

```

SELECT
    CountryCode,
    COUNT(*) AS total_restaurants,
    ROUND(
        COUNT(*) * 100.0 /
        (SELECT COUNT(*) FROM zomato_dataset),
        2
    ) AS percentage
FROM zomato_dataset
GROUP BY CountryCode
ORDER BY percentage DESC;

```

---

### 4 Find which countries provide online delivery options and calculate the percentage of restaurants offering online delivery

```

SELECT
    CountryCode,
    COUNT(*) AS total_restaurants,
    SUM(CASE
        WHEN HasOnlineDelivery = 'Yes' THEN 1
        ELSE 0
    END) AS online_delivery_restaurants,
    ROUND(
        SUM(CASE
            WHEN HasOnlineDelivery = 'Yes' THEN 1
            ELSE 0
        END) * 100.0 / COUNT(*),
        2
    ) AS online_delivery_percentage
FROM zomato_dataset

```

```
GROUP BY CountryCode
ORDER BY online_delivery_percentage DESC;
```

---

**5** Find the city and locality in India where the maximum number of restaurants are listed on Zomato

```
SELECT
    City,
    Locality,
    COUNT(RestaurantID) AS total_restaurants
FROM zomato_dataset
WHERE CountryCode = 1
GROUP BY City, Locality
ORDER BY total_restaurants DESC
LIMIT 1;
```

---

**6** Find the types of food/cuisines available in the Indian locality where the maximum restaurants are listed

```
SELECT DISTINCT Cuisines
FROM zomato_dataset
WHERE Locality = 'Connaught Place'
AND CountryCode = 1;
```

---

**7** Find the most popular food/cuisine in the Indian locality having the maximum listed restaurants

```
SELECT
    Cuisines,
    COUNT(*) AS total_restaurants
FROM zomato_dataset
WHERE Locality = 'Connaught Place'
AND CountryCode = 1
GROUP BY Cuisines
ORDER BY total_restaurants DESC
LIMIT 1;
```

---

**8** Find the localities in India having the lowest number of restaurants listed on Zomato

```
SELECT
    Locality,
    COUNT(RestaurantID) AS total_restaurants
FROM zomato_dataset
WHERE CountryCode = 1
GROUP BY Locality
HAVING COUNT(RestaurantID) > 0
ORDER BY total_restaurants ASC;
```

---

**9** Find how many restaurants offer table booking options in the Indian locality where the maximum restaurants are listed

```
SELECT
    Locality,
    COUNT(*) AS table_booking_restaurants
FROM zomato_dataset
WHERE Locality = 'Connaught Place'
AND CountryCode = 1
AND HasTableBooking = 'Yes'
GROUP BY Locality;
```

---

**10** Analyze how ratings are affected by table booking options in the locality with the maximum restaurants (Connaught Place)

```
SELECT
    HasTableBooking,
    ROUND(AVG(AggregateRating), 2) AS average_rating,
    COUNT(*) AS total_restaurants
FROM zomato_dataset
WHERE Locality = 'Connaught Place'
AND CountryCode = 1
GROUP BY HasTableBooking;
```

---

## 1 1 Find the average rating of restaurants locality-wise

```
SELECT
    Locality,
    ROUND(AVG(AggregateRating), 2) AS average_rating,
    COUNT(*) AS total_restaurants
FROM zomato_dataset
GROUP BY Locality
ORDER BY average_rating DESC;
```

---

## 1 2 Find the best restaurants in India with:

- Indian cuisines
- Moderate cost for two
- Table booking available
- Online delivery available
- High votes
- High ratings

```
SELECT
    RestaurantName,
    City,
    Locality,
    Cuisines,
    AverageCostForTwo,
    AggregateRating,
    Votes
FROM zomato_dataset
WHERE CountryCode = 1
AND Cuisines LIKE '%Indian%'
AND AverageCostForTwo BETWEEN 500 AND 2000
AND HasTableBooking = 'Yes'
AND HasOnlineDelivery = 'Yes'
AND Votes > 500
AND AggregateRating >= 4.0
ORDER BY AggregateRating DESC, Votes DESC;
```

---

## 1 3 Find restaurants offering table booking options along with price range and high ratings

```
SELECT
    RestaurantName,
```

```
    City,  
    Locality,  
    PriceRange,  
    AggregateRating,  
    Votes  
FROM zomato_dataset  
WHERE HasTableBooking = 'Yes'  
AND AggregateRating >= 4.0  
ORDER BY AggregateRating DESC, Votes DESC;
```

---

## Key Insights

- ◇ Connaught Place has one of the highest restaurant concentrations in India.
  - ◇ Restaurants with table booking generally have better ratings.
  - ◇ Online delivery availability varies significantly country-wise.
  - ◇ Indian cuisine dominates restaurant listings.
  - ◇ Higher-rated restaurants usually have:
    - More votes
    - Table booking support
    - Online delivery support
    - Moderate to premium pricing
- 

## Skills Demonstrated

- SQL Aggregations
  - Window Functions
  - Filtering & Sorting
  - Group By & Having
  - Business Analysis
  - Data Exploration
  - Real-world Data Analytics
-

## Contributing

Contributions are welcome. Feel free to fork this repository and improve the analysis.
